

# WeedSOFT Predictions of Corn and Soybean Yield Loss

**Mark R. Jeschke, David E. Stoltenberg,  
J. Anita Dille, Gregg A. Johnson,  
George O. Kegode, Stevan Z. Knezevic,  
Shawn M. Hock, and Christy M. Sprague**

# WeedSOFT

- **Weed management decision support system**
- **ADVISOR predicts crop yield loss based on weed species and density**
- **Competitive index modifiers (CIM) are used to adjust weed competitiveness based on relative weed and crop growth stage**

WeedSOFT crop and weed growth stages

Stage	Corn	Soybean	Weeds
			Inches
1	V1	V1	0-2
2	V2-V4	V2-V3	2-4
3	V5-V8	V4-V5	4-8
4	V9-V14	R1-R8	>8

WeedSOFT CIM values

Weed Growth Stage	Crop Growth Stage			
	1	2	3	4
1	1	0.6	0.3	0.1
2	1.25	0.75	0.35	0.15
3	2	1.25	0.65	0.25
4	2.5	1.5	0.75	0.35

# Objectives

- Determine corn and soybean yield loss associated with four cohorts of a multi-species weed community

Cohort: weeds that emerge at about the same time

- Validate crop yield loss predictions made by WeedSOFT

## Target Species

Common Lambsquarters

Giant Ragweed

Velvetleaf

Redroot Pigweed

Tall Waterhemp

Woolly Cupgrass

Giant Foxtail

Yellow Foxtail

Barnyardgrass

Large Crabgrass

# Experiment Sites

	Corn		Soybean	
	2004	2005	2004	2005
Arlington, WI	X	X	X	X
Waseca, MN	X		X	
Fargo, ND	X	X	X	X
East Lansing, MI			X	X
Concord, NE			X	
Manhattan, KS	X			

# Methods

- 30-inch row spacing in corn
- 7.5-inch row spacing in soybean
- Glyphosate was applied to keep plots weed free until specified emergence time

## Cohort Establishment Timings

Cohort	Corn Growth Stage	Soybean Growth Stage
1	VE	VE
2	V2	VC
3	V4	V1
4	V6	V3

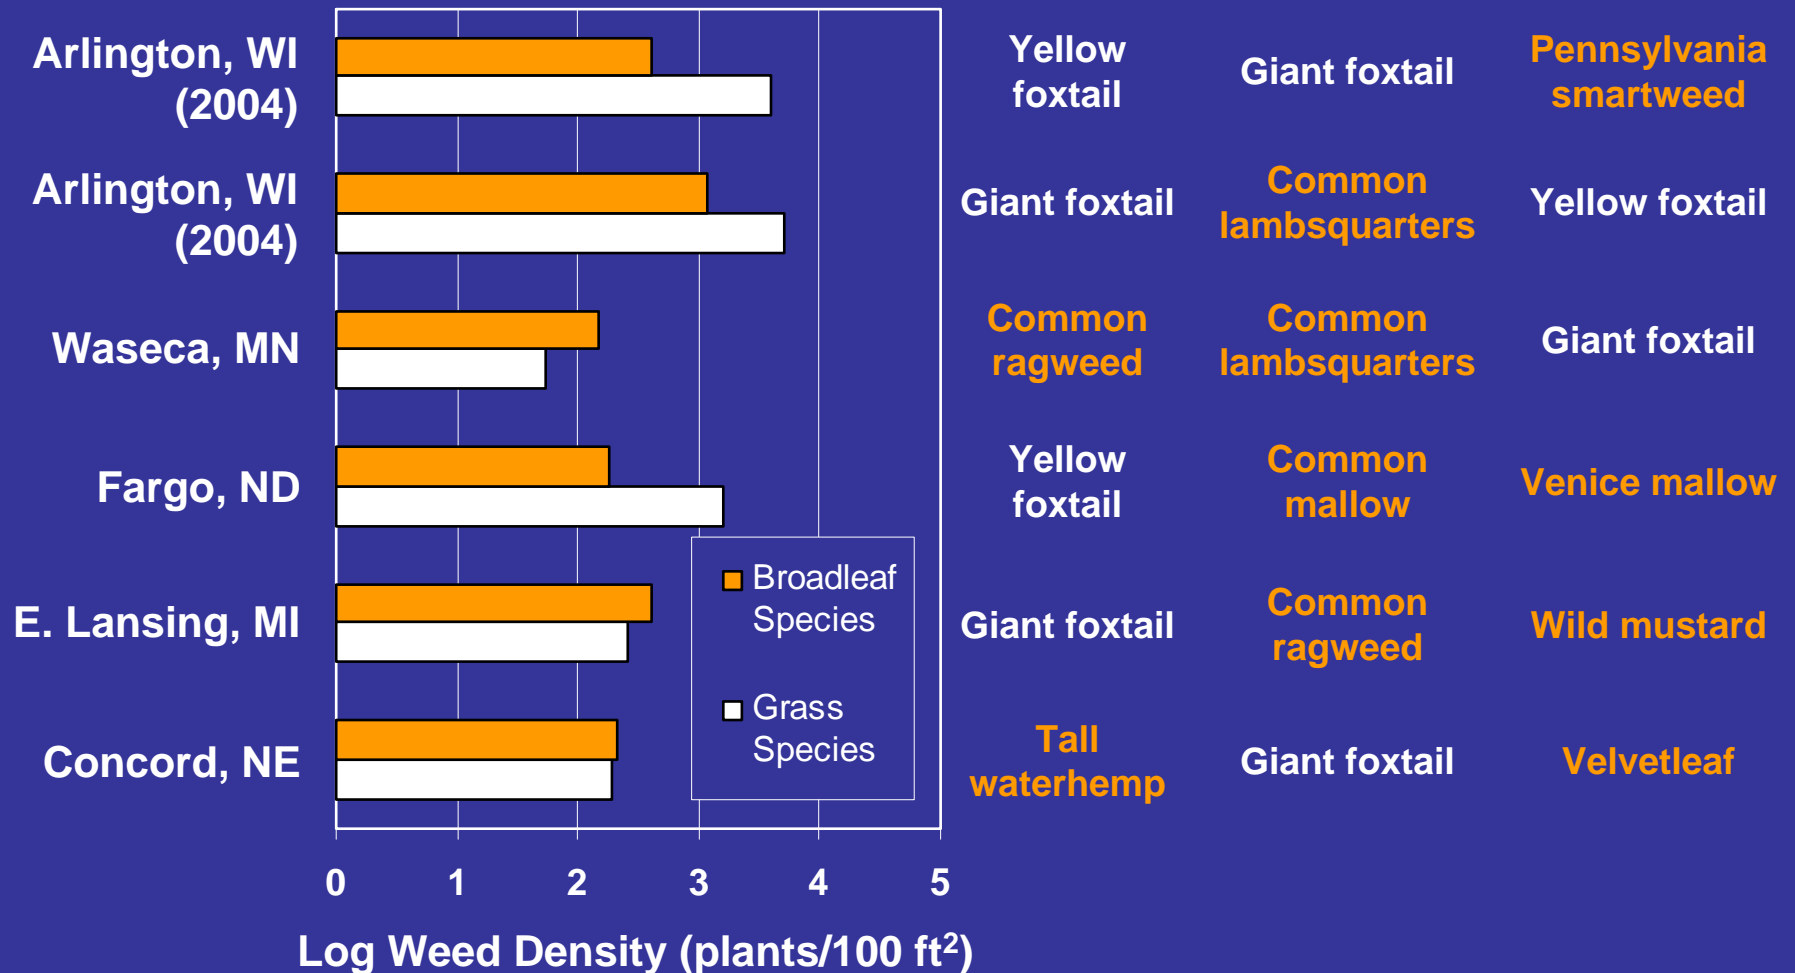

# Weed Communities: **Corn**

# Weed Communities: Soybean

# Corn Yields

# Arlington, WI 2005

**Cohort 1**

**Cohort 2**

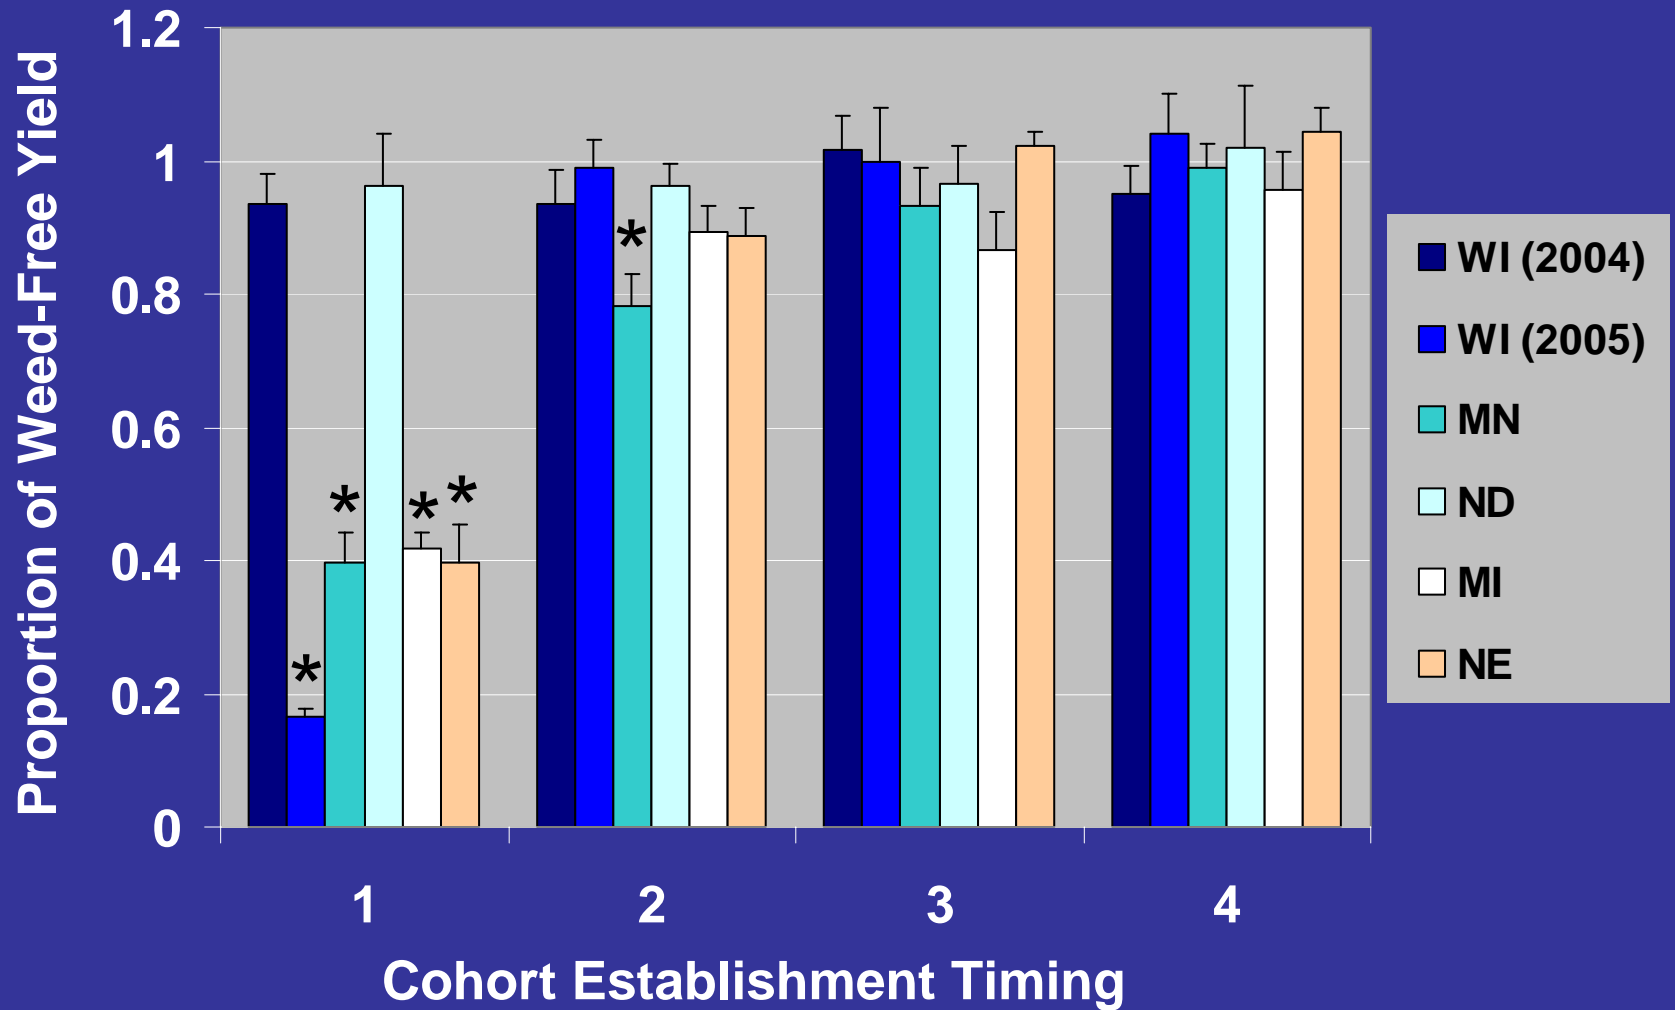

**Cohort 3**

**Cohort 4**

# Soybean Yields

# WeedSOFT Yield Loss Predictions

- Based on weed density two weeks after cohort establishment
- Crop yield from season-long weed-free treatment used to determine yield loss

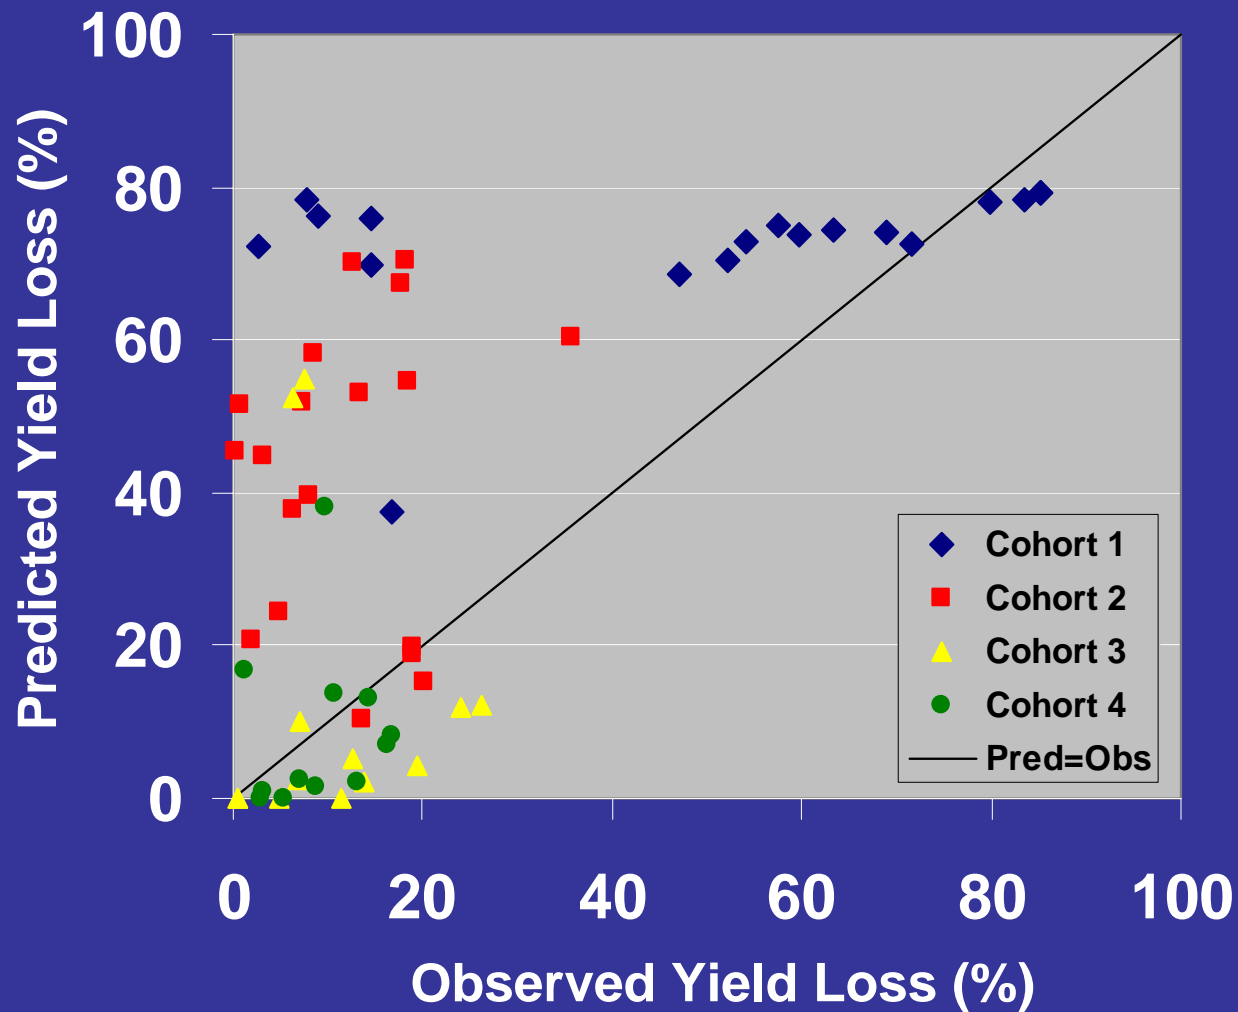

# Predicted vs. Observed: **Corn**

# Predicted vs. Observed: Soybean

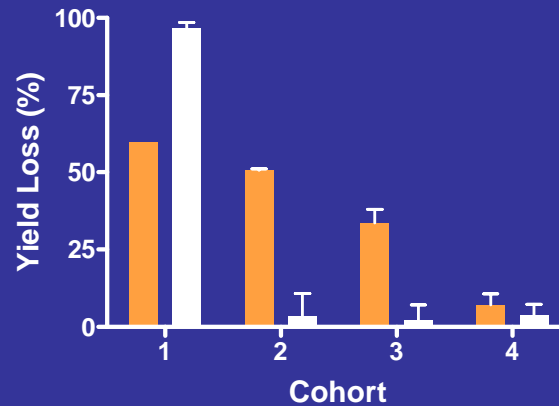

# Predicted vs. Observed: **Corn**

Arlington, WI Corn (2004)

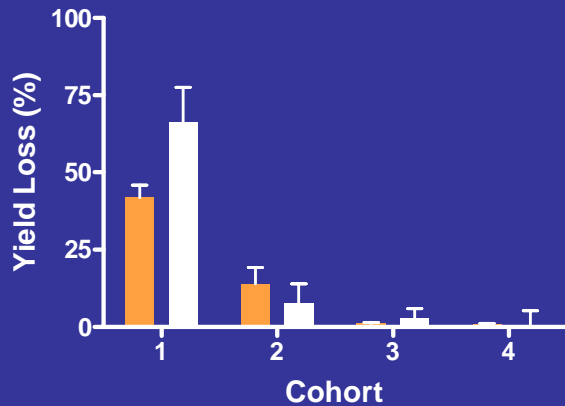

Arlington, WI Corn (2005)

Waseca, MN Corn

Fargo, ND Corn

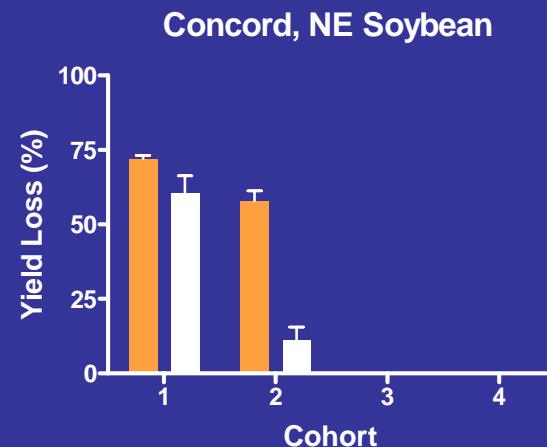

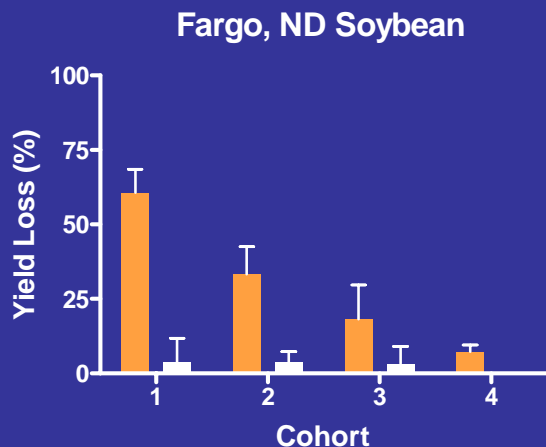

Manhattan, KS Corn

# Predicted vs. Observed: Soybean

# Summary

- Weed communities typically consisted of grass species and a few moderately competitive broadleaf species
- Large yield losses were observed for cohort 1 in corn and soybean
- WeedSOFT over-predicted crop yield loss, particularly in cohort 2
  - V2 in corn, VC in soybean
- Greatest over-prediction of crop yield loss was in grass-dominated weed communities

# Conclusions

- **Differential cohort effect among weed species**
- **Accuracy of WeedSOFT predictions would likely be improved by adjusting competitive index modifier values to account for this cohort effect**
